

Appendix: Berkeley codes for NCI/NTP Bioassays

Code	Definitions of Berkeley Codes
C	The TD ₅₀ includes all animals with a tumor at any site with a “c” opinion. The mix was created for the CPDB, and MXB appears on the left side of the plot.
M	The TD ₅₀ includes all animals with a tumor at any site with a “c” or “p” opinion. The mix was created for the CPDB, and MXB appears on the left side of the plot.
P	The TD ₅₀ includes all animals with a tumor at any site with a “p” opinion. The mix was created for the CPDB, and MXB appears on the left side of the plot.
S	The TD ₅₀ has been included in the plot because the sites were statistically significant in the tables of analyses of primary tumors, and the TD ₅₀ based on lifetable analysis was significant at the $p < 0.05$ level; however, the NCI/NTP report did not evaluate the site as evidence of carcinogenicity. The statistical sites reported in the CPDB are dependent upon the statistically significant results reported in NCI/NTP Technical Reports. Over time, the statistical tests included in Technical Reports have changed.
